Father Muller Road, Kankanady, Mangaluru - 575 002, India
DEPT. OF RADIO-DIAGNOSIS & IMAGING

MR - 14E

Patient Name	: [REDACTED]	Age / Gender	: 51 Years / Female
Reg No	: 170117631 / IP 795370	Ward / Bed No	: O WARD / O Sur F 44
Request No	: 779233	Referred by	: Dr JOHN JOSEPH S. MARTIS MBBS,MS \ SURGERY UNIT B
Requested Date and time	: 31-10-2019/12:32	Reported date and time	: 01-11-2019 / 11:14
Cl. Diagnosis	:	Done By	: Dr LENON JASON DSOUZA

MAMMOGRAM BILATERAL

MAMMOGRAM - BILATERAL BREAST

Indication - Case of Carcinoma right breast.
- No previous mammograms available for comparison

- Craniocaudal and mediolateral views are studied
- Breast composition : Predominantly fatty breast pattern noted

Right breast

- Lobulated high density mass noted in inner lower quadrant of right breast.
- 2.8x2.1cms well defined smooth margins noted in high density mass lesion noted in upper quadrant in periaxillary region measuring 4.5x3.2cms.
- Few prominent right axillary lymphnodes noted with few showing loss of fatty hilum.
- No evidence of micro/macrocalfication
- No evidence of skin/trabecular thickening
- No evidence of skin/ nipple retraction.

Left breast

- Small high density opacity noted in outer upper quadrant of left breast- likely intramammary lymphnode.
- Prominent left axillary lymphnodes noted with maintained fatty hilum.
- No evidence of skin/trabecular thickening
- No evidence of skin/ nipple retraction.

IMPRESSION: Known case of Carcinoma right breast, present study shows-
- BI-RADS - VI.
