Father Muller Road, Kankanady, Mangaluru - 575 002, India

DEPT. OF RADIO-DIAGNOSIS &amp; IMAGING

MR-14E

Patient Name	: <del>XXXXXXXXXX</del>	Age / Gender	: 59 Years / Female
Reg No	: 14/170086279 /	Ward / Bed No	: / --
Request No	: 705585	Referred by	: Dr CLEMENT R.S. D SOUZA MBBS,DNB MEDICINE UNIT D
Requested Date and time	: 09-05-2019/07:53	Reported date and time	: 09-05-2019 / 11:20
Cl. Diagnosis	:	Done By	: Dr LENON JASON DSOUZA

**MAMMOGRAM SINGLE**

**MAMMOGRAM - LEFT BREAST**

Indication - Follow up - Known case of carcinoma right breast.  
Post operative status (10 years ago), on follow up.

- Craniocaudal and mediolateral views are studied
- Breast composition : Type A : predominantly fatty breast
- Lobulated mass is noted at 12 - 1 O'clock position of left breast with high density measuring approximately 30x23mm.
- The lesion was correlated on sonomammogram it appears hypoechoic with evidence of fine pleomorphic calcification within.
- The lesion shows posterior acoustic enhancement.
- No evidence of skin/trabecular thickening
- No evidence of skin/nipple retraction
- Multiple left axillary lymphnodes
- An intramammary lymphnode is seen adjacent to the mass

**IMPRESSION:**

KNOWN CASE OF CARCINOMA RIGHT BREAST, ON FOLLOW UP  
PRESENT MAMMOGRAM SHOWS :

- LOBULATED MASS IN THE LEFT BREAST AS DESCRIBED - SUSPICIOUS FOR MALIGNANCY - BI-RADS - CATEGORY 4 C.  
SUGGESTED FNAC CORRELATION.
