(A unit of Father Muller Charitable Institutions)
Father Muller Road, Kankanady, Mangaluru - 575 002, India
DEPT. OF RADIO-DIAGNOSIS & IMAGING

MR - 14E

Patient Name	: Ms. SPANDANA G. G. G.	Age / Gender	: 55 Years / Female
Reg No	: 14/200042396 /	Ward / Bed No	: / --
Request No	: 856620	Referred by	: Dr VINODA KUMAR B. MBBS,DNB \ SURGERY UNIT B
Requested Date and time	: 06-10-2020/12:35	Reported date and time	: 06-10-2020 / 17:20
Cl. Diagnosis	:	Done By	: Dr RITHI MELISSA D SILVA

MAMMOGRAM BILATERAL

MAMMOGRAM - BILATERAL BREAST

Indication - Lump in left breast

- No previous mammograms available for comparison

- Craniocaudal and mediolateral views are studied

- Breast composition : Scattered areas of fibroglandular density noted.

Right breast

- Well defined oval opacity noted in retroareolar location.

- No asymmetry/architectural distortion

- No evidence of micro/macrocalfication

- No evidence of skin/trabecular thickening

- No evidence of skin/nipple retraction

- No evidence of axillary lymphadenopathy

USG correlation reveals- Well defined, wider than taller, hypoechoic lesion at 9'o' clock position with no internal vascularity/ calcification- likely fibroadenoma.

Left breast

- Well defined opacity noted in upper quadrant of left breast posteriorly in MLO view.

- No asymmetry/architectural distortion

- No evidence of micro/macrocalfication

- No evidence of skin/trabecular thickening
